Overlap with language modelling

Hold experiments on 2 models using overlap:

- **simple-lstn**, a very basic lstm
- **mos-lstm**, MOS Mixture of Softmaxes

To specify which model to run, use `--main-model {simple-lstm | mos-lstm}`. There are additional common paramaters as well as specific parameters for each model. Those can be found in `main_run.py`.

Simple lstm

```
python3 main_run.py --main-model simple-lstm --epochs 1000
```

MOS lstm
